

## Section VI, Part Four Response

### **Phase II - Consultation**

After the proposal has been accepted, a Solution Agreement Meeting is held. The SAM is a structured, moderated roundtable meeting. It involves the core team members (client and Marketware) for the project. A structured SAM document is employed to lead the participants through the critical issues of the project and gain design resolution on details. The SAM results in a clearly articulated, written 'vision' of the solution, detailing exactly what information or deliverables will be collected during the engagement phase. That information can include:

- Machine Name
- MAC Address
- Protocols
- Operating System
- Physical Location
- Serial No./Asset No.
- Owner/User Name
- Installed Hardware Report
- Installed Software Report

### **Phase III - Engagement**

In the engagement phase, Marketware engineers will install the GASP® auditing software and begin the actual gathering of the information specified in the SAM. Upon completion of the audit, the engineer will compile a detailed report, per node, of that information. The data from the software report is then reconciled with the clients existing software license data, and any discrepancies can be corrected and the client brought to compliance.

The following chart represents the product licensing information for all GASP® products. Software costs can be found in table A5, and the Marketware Software License Risk Management service can be found in section A12, Additional Services.

## JAMCRACKER™ ENTERPRISE

**Jamcracker.**

SOUNDS LIKE A JOB FOR JAMCRACKER™

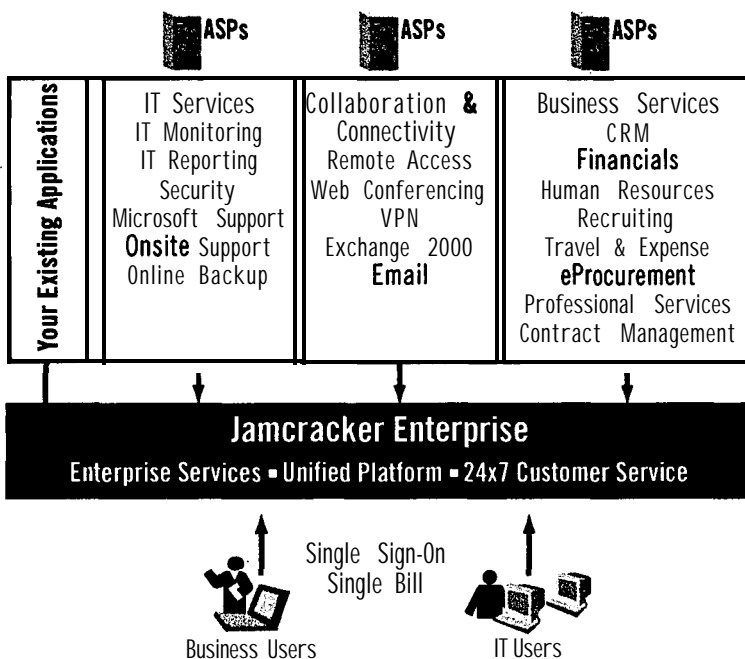

www.jamcracker.com

### WHAT JAMCRACKER DOES

In the past, expanding your IT capabilities with new technology was a risky proposition that required large capital investments in hardware and software, a new operations infrastructure, and re-training of existing staff or recruiting for new skills.

Not any longer. Application service providers (**ASPs**) make it possible for organizations to add new capabilities quickly without the headaches of traditional IT sourcing. Yet even the ASP model has its share of challenges: How do you know if the ASP is the best in its class? How do the new services integrate with your existing systems and with each other? Where do you go for support? How many passwords do you have to remember?

That's where Jamcracker Enterprise comes in. Jamcracker Enterprise delivers integrated Web-based services that help businesses more quickly, easily and affordably deploy new IT and business applications. We've reduced the risk associated with adopting new Web-based technologies by partnering with the best **ASPs** in the industry, integrating their breadth of services on our scalable platform, making these services available via a single sign-on, and wrapping it all up with 24x7 support.

*With Jamcracker Enterprise, end-users can access a broad range of business and IT applications and services from best-of-breed ASPs—all with a single sign-on and a single point of support.*

### HOW JAMCRACKER HELPS YOU

**ECONOMIES OF SKILL** to help make sense out of current and emerging technologies and how they apply to your business. Small organizations requiring access to a broad base of skills can more easily build out their IT and business capabilities. And large organizations that want to deploy next-generation IT applications services at a minimal cost can facilitate a smooth transition to Web-based applications and services.

**SPEED OF DEPLOYMENT** by leveraging the Web to get applications and services up and running quickly while maintaining your existing environment.

**A SINGLE POINT OF ACCOUNTABILITY** for all co-sourced services, and greater influence over vendors should it be necessary to diagnose and resolve unforeseen problems.

**LOWER UP-FRONT CAPITAL EXPENSES** and improved buying power, giving customers more for each technology dollar by sharing costs across multiple organizations.

**AN EVOLUTION PATH** for small companies that need to quickly and affordably build and manage an enterprise infrastructure: for high-growth companies that need help keeping pace with changing business requirements; and for large organizations looking to evolve their existing IT infrastructure and adopt new net-based applications.

**FLEXIBILITY** to add users and services as needed at any time.

**IMPROVED FOCUS** by freeing IT organizations from maintaining baseline applications and supporting end users. Jamcracker allows you to focus on solving more challenging problems and delivering world-class technology solutions that are strategic to your business.

## WHAT YOU GET WITH JAMCRACKER ENTERPRISE

### UNIFIED PLATFORM

Jamcracker Enterprise begins with a unified platform that is built upon a scalable Internet-based architecture, providing users with single sign-on access over the Web to a breadth of business and IT services. Furthermore, it enables you to add new services and deploy them to your organization rapidly.

Here's what the platform delivers:

Integration: One URL, username, and password get users access to the breadth of applications, services, and support. Administrators can provision services to new employees with just a few mouse clicks, and you get a single bill for all your services regardless of individual vendor. What's more, our architecture supports integration with your legacy systems, enabling you to co-source your applications and capitalize on your existing investments.

Security: Jamcracker supports industry-standard security technologies including 128-bit SSL, private key encryption, public key encryption, public key infrastructure, security policy servers, and multiple firewalls.

Performance: Built with leading technologies from Oracle, Sun, BEA, and more, the Jamcracker platform delivers the exceptional performance you need for your enterprise.

Scale: Jamcracker provides an industry-leading LDAP-based directory server for user management, including reporting and organization chart capability. This provides Jamcracker the ability to support your need to scale for growth.

### WEB-BASED SERVICES

Jamcracker offers 24x7 access to an unmatched breadth and choice of enterprise services from a variety of leading vendors. Because we thoroughly test these services for functionality, performance, scalability, security, and support, you are assured of getting only best-of-breed services without expending time and energy evaluating the hundreds of available vendors.

Here's a sample of the applications and services we offer today:

Business Services: CRM, enterprise **financials**, contract management, expense management, HR management, recruiting, professional services automation

IT Services: Microsoft desktop support, IT marketplace, online backup, on-site support, security services

Collaboration and Connectivity: **Email**, Exchange server, remote access, VPN, web conferencing

You choose the services that are right for your company, and we deploy them throughout your organization quickly and efficiently. After deployment, you and your users access these services with a single sign-on through a personalized workspace called Jamcracker Central."

### DEPLOYMENT AND 24x7 CUSTOMER SUPPORT

Jamcracker customer care starts the moment you sign up. Your account manager becomes the interface between your company and Jamcracker for deploying services, exchanging reports and information, discussing performance and the status of your account, and coordinating future plans.

After Jamcracker Enterprise is deployed in your organization, you receive the 24x7 service and support that is quickly becoming legendary in the industry. Your users and administrators can contact a Jamcracker support representative via phone, online chat, **email**, or Jamcracker Central to get answers, request services, report problems, and more.

After logging the request, the Jamcracker representative takes full ownership of the issue until it is resolved. We'll also provide a variety of reports to your administrators that analyze our ability to deliver on our commitments.

### TAKE THE NEXT STEP

Jamcracker Enterprise is available today. Just call 1-800-450-6054 or [emailinfo@jamcracker.com](mailto:emailinfo@jamcracker.com).

Looking for a whole new way to work? Sounds like **a job** for Jamcracker."

## BUSINESS SERVICES

## JAMCRACKER™ HUMAN RESOURCE MANAGEMENT SERVICE BY EMPLOYEEASE

jamcracker.

### SOLUTION AT A GLANCE

Human **capital management** and **performance management** is one of the top concerns of every company in America. Yet, instead of focusing on the strategic issues involved in developing a **world-class** workforce, improving productivity, and increasing retention, employers currently spend **60-80%** of **their** HR effort on administration, according to the latest research.

To gain control over your administrative burden, you could turn to traditional HRMS solutions. While these solutions often improve administrative processes, **the** cost and complexity associated with installing, configuring, maintaining and upgrading **them** has placed **these** solutions out of financial and technical reach for many companies. **In addition, these in-house systems don't utilize the collaboration advantages offered by the Web, where you can connect to providers, employees, and managers.**

With the Jamcracker™ Human Resource Management Service by Employeease, you can quickly adopt a secure, Web-based human resource solution that gives you the HR management functionality you need — both today and tomorrow.

### HOW IT WORKS

As a purely Web-based solution, the Jamcracker Human Resource Management Service can be rolled out to your organization quickly, without the need to purchase new hardware or install new software.

Once deployed, your employees, managers, and administrators can be up and running immediately, with each role possessing unique capabilities:

• **Employee Access** enables you to put HR and benefits information into the hands of employees on a 24x7 basis, improving information accuracy, lowering call volumes, reducing printing costs, and decreasing administrative hassles.

• **Manager Access** puts managers in touch with critical information about their direct reports: compensation, work history, promotions, and so on.

• **Employer Access** is the main point of contact for your HR and benefits staff, enabling them to administer benefits, track and manage payroll, analyze compensation data, manage compliance with regulations, and more

### WHAT YOU GET

Intuitive interfaces make it easy for your employees to tap into the robust capabilities of the system. Within days of rollout, they'll already start to see how they can streamline administrative processes and access better information.

Equally important to your organization are the data connections you can establish with other systems and entities such as payroll providers, insurance carriers, outsourcers, COBRA vendors and brokers. Imagine eliminating redundancies while improving data accuracy and lowering costs. With the Jamcracker Human Resource Management Service by Employeease, you'll be able to participate in a connected world where employees, employers and service providers all communicate seamlessly.

### WHY CHOOSE JAMCRACKER?

The Jamcracker Human Resource Management Service by Employeease is only part of a larger solution known as Jamcracker Enterprise, which is made up of three central components:

• **Enterprise services:** A broad range of business and IT applications, including collaboration, connectivity, and application integration capabilities. These services are available either individually or as part of a package of solutions.

• **Unified platform:** Built with leading technologies, Jamcracker Enterprise delivers personalization, performance, security, and reliability. Our services are available from **anywhere** on the Internet through Jamcracker Central™ with a single sign-on.

• **24x7 customer care:** Experts with the operations know-how and focus to keep users up and running every day, around the clock. End-users contact the Jamcracker Service Center with all their support needs.

With Jamcracker Enterprise, you can add new capabilities as quickly as your business grows. Our goals? To provide economies of scale in IT infrastructure enjoyed only by the world's largest organizations. And to enable users to have unified access and support for the business capabilities they need anytime, anywhere.

### TAKE THE NEXT STEP

## IT SERVICES

### JAMCRACKER™ ONLINE BACKUP SERVICE BY CONNECTED

jamcracker.

#### SOLUTION AT A GLANCE

How much of your data resides on a computer that isn't backed up regularly? Probably quite a bit. Multiply that by all the salespeople with laptop computers and telecommuters working from home, and your company is playing with fire. Without regular backup, these data are at risk from natural disasters, theft, and untold other catastrophes.

The **Jamcracker™** Online Backup Service by Connected can help. It provides an easy-to-implement, Internet-based backup-and-retrieve solution that works for computers anywhere in the world, **24x7, 365** days a year. You can access the service at any time, from any location — off ice, home, and on the road.

The service automatically backs up your data from any PC at any frequency desired. When you need to access your data, you simply **login**, then point and click a few times. It's that easy.

#### HOW IT WORKS

The first time you access the service, through an easy-to-install client application and a connection to the Internet, the Jamcracker Online Backup Service performs a full backup on the files pre-selected by the user or administrator. The files reside on a central server that's protected by the most advanced security mechanisms.

Then, you can set the service to perform backups automatically or manually. And subsequent backups simply update the files that have changed. It takes only minutes, depending on the speed of your Internet connection.

When you need to access your backed-up files, simply launch the client application and find the files you need. With Connected's **iRoam** feature, you can also use any web browser, making it possible to access your files from, for example, a client's office or your home computer.

#### WHAT YOU GET

Here are the capabilities you get with the Jamcracker Online Backup Service:

**BACKUP** is the core technology that allows files from the PC to be saved on a remote server. It maintains a complete snapshot of the PC so that the PC can be rebuilt in the case of hard disk crash, loss, or theft.

**iROAM** lets you access all your files from any computer anywhere, using only a web browser and Internet connection.

**HEAL** allows users and IT personnel to quickly repair any PC software problem, such as damaged or corrupted configurations, applications, settings, and so on. Healing can be performed automatically by both users or by remote IT staff.

**REMOTE ASSIST** enables your in-house support personnel to take full control of any PC to diagnose and heal the computer.

**AUDIT** tracks all hardware and software on every PC in the company. This information can be used to generate reports or exported for use in asset management tools.

#### WHY CHOOSE JAMCRACKER?

The Jamcracker Online Backup Service is only part of a larger solution known as Jamcracker Enterprise, which is made up of three central components:

• **Enterprise services:** A broad range of business and IT applications, including collaboration, connectivity, and application integration capabilities. These services are available either individually or as part of a package of solutions.

• **Unified platform:** Built with leading technologies, Jamcracker Enterprise delivers personalization, performance, security, and reliability. Our services are available from anywhere on the Internet through Jamcracker Central™ with a single sign-on.

• **24x7 customer care:** Experts with the operations know-how and focus to keep users up and running every day, around the clock. End users contact the Jamcracker Service Center with all their support needs.

With Jamcracker Enterprise, you can add new capabilities as quickly as your business grows. Our goals? To provide economies of scale in IT infrastructure enjoyed only by the world's largest organizations. And to enable users to have unified access and support for the business capabilities they need anytime, anywhere.

CAPABILITIES	HOW IT HELPS
DELTA BLOCK™	This file comparison technology backs up only the changed portions of each file rather than the whole file, effectively reducing the session on a dial-up line to seconds or minutes.
SEND ONCE™	This technology increases the speed of operation and reduces network load by storing only one single copy of files (e.g., operating system, application and data files), that are common to multiple users.
POINT-IN-TIME HEAL™	Users and IT staff can restore their systems and configurations online to any point in the past, improving user productivity and reducing support center calls.
HANDS-FREE OPERATION™	Automatically snapshot your PC whenever you're connected to the Internet network, removing the burden of manual backups. Backups can run silently and in the background, while you're doing something else.
HANDS-FREE INSTALL™	Administrators can install large numbers of client agents without user intervention. Hands-Free Install works independently and together with software distribution tools from vendors such as Tivoli®, Computer Associates®, and Microsoft®.
24 x 7 SYSTEM AVAILABILITY	You can have access to your critical files no matter what time of day-without getting your overworked IT staff involved.
